

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A wireless terminal for mobile unit which is mounted in a mobile unit and conducts communication with a wireless base station through wireless, said wireless terminal comprising:

an operating section for starting the communication with the wireless base station; and

a controller for performing a first operation in which the controller allows ~~allowing only~~ an information to be output from the wireless terminal to the wireless base station and in which the controller prevents information from the wireless base station from being conveyed to a user of the wireless terminal in response to ~~a fact that~~ the operating section ~~has been~~ being operated by the user.

2. (currently amended): A wireless terminal for mobile unit as defined in claim 1, wherein said controller performs a second operation in which the controller allows an ~~information to be output from~~ to the wireless base station and in which the controller allows information from the wireless base station to be conveyed to the user in response to ~~the fact that~~ the operating ~~means has~~ section again ~~been~~ being operated by the user while the first operation is performed ~~when having allowed only the information output from the wireless terminal to the wireless base station in response to the fact that the operating section has been operated.~~

3. (currently amended): A wireless terminal for mobile unit as defined in claim 1, wherein said controller performs a second operation in which the controller allows an information to be output from to the wireless base station and in which the controller allows information from the wireless base station to be conveyed to the user in response to ~~the fact that~~ the operating section ~~has again been~~ being operated by the user a predetermined period of time after the first operation has been initiated ~~operating section has been operated when having~~ ~~allowed only the information output from the wireless terminal to the wireless base station in~~ ~~response to the fact that the operating means has been operated.~~

4. (currently amended): A wireless terminal for mobile unit as defined in claim 1, wherein said controller performs a second operation in which the controller allows a voice information to be output from to the wireless base station and in which the controller allows audio information from the wireless base station to be conveyed to the user in response to the wireless terminal receiving a voice output request message sent from the wireless base station when the first operation is performed ~~having allowed only the information output from the~~ ~~wireless terminal to the wireless base station in response to the fact that the operating means has~~ ~~been operated.~~

5. (currently amended): A wireless terminal for mobile unit as defined in claim 1, wherein said controller performs a second operation in which the controller allows an image information to be output from to the wireless base station and in which the controller allows

image information from the wireless base station to be conveyed to the user in response to the wireless terminal receiving an image output request message sent from the wireless base station when the first operation is performed ~~having allowed only the information output from the wireless terminal to the wireless base station in response to the fact that the operating means has been operated.~~
